

KTX Driver App Installation Guide

For Android phones · takes about 5 minutes

Before you start

- An **Android phone** (Android 8.0 or newer). This guide is not for iPhone.
- **Internet** (mobile data or Wi-Fi)
- **Your phone number** registered with KTX — your sign-in link comes by text message
- App download address:

1 Download

2 Install

3 First setup

4 Sign in

5 Use

Screens and button names can look slightly different depending on your phone brand.

1 Download the app

- 1 Open **Chrome** on your phone and type the **app download address** from the cover page.

If KTX sent you the link by text or message, just tap the link.

- 2 If you see "**File might be harmful**", tap **Download anyway**.

Chrome shows this warning for **every app file** that does not come from the Play Store. KTX made this app, so it is safe.

File might be harmful

Do you want to download
ktx-driver-1.0.0.apk
anyway?

Cancel

Download anyway

- 3 When the download finishes, tap **Open** at the bottom of the screen.

Missed it? Swipe down from the top of the screen and tap **ktx-driver-....apk** in the notifications.

2 Install the app

- 1 If you see "For your security, your phone is not allowed to install unknown apps from this source", tap **Settings**.

(If this message does not appear, go to step 3.)

For your security, your
phone currently isn't
allowed to install unknown
apps from this source.

Cancel

Settings

- 2 On the **Chrome** page, turn on the switch (**Allow from this source** or **Allow permission**).

Then press your phone's **Back**.

Install unknown apps

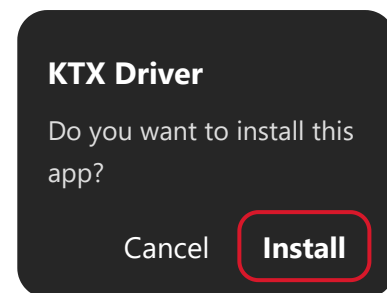

Chrome

Allow from this
source

- 3 When asked "Do you want to install this app?", tap **Install**.

If a **Play Protect** window appears, tap the button with "**Install**" in it (for example "Install anyway"). If it says the install was blocked, open the downloaded file again and install once more.

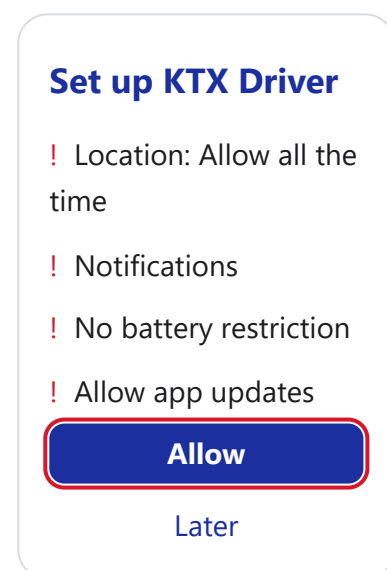

- 4 When it is installed, tap **Open**.
Next time, just tap the **KTX Driver** icon on your home screen.

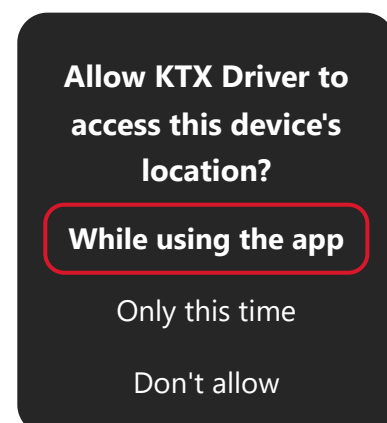

3 First setup (only once)

The first time you open the app you see "**Set up KTX Driver**". These settings keep your location sending while you drive, so please **allow all of them**.

- 1 Tap **Allow**.
Then answer the windows that follow, in this order.

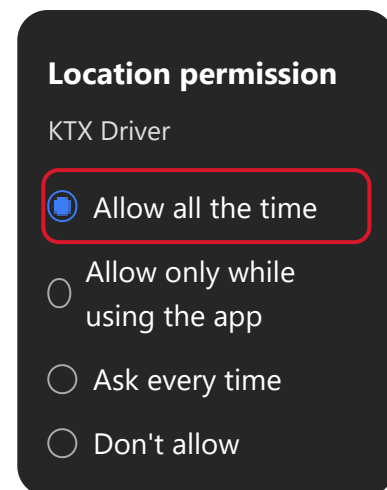

- 2 In the location window, tap **While using the app**.

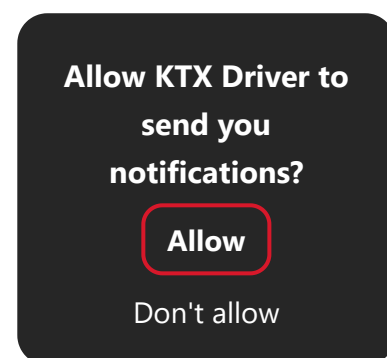

3 On the next screen choose **Allow all the time**, then press **Back**.

It **must be "Allow all the time"**. Otherwise your truck's location is not sent while the screen is off.

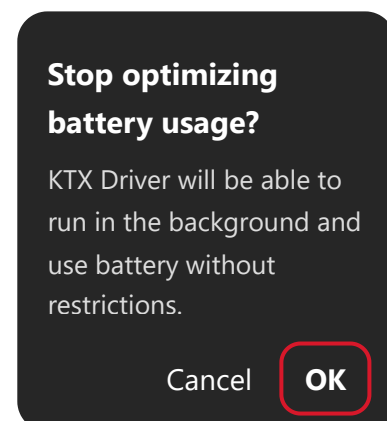

4 In the notifications window, tap **Allow**.
You will then see "KTX: Sending location" while your location is being sent.

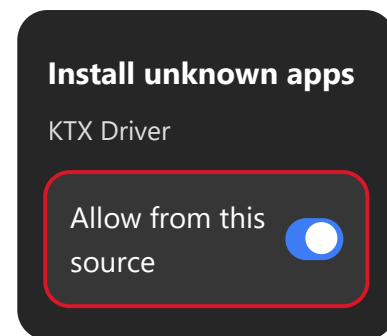

5 In the battery window ("Stop optimizing battery usage?" or "Let app always run in background?"), tap **OK** or **Allow**.

Very important. Without it, location sending stops on long drives or when you clear your recent apps.

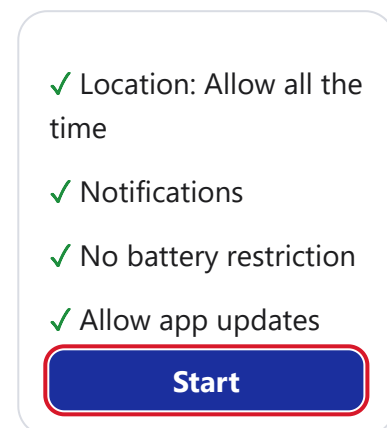

- 6 On the **KTX Driver** "Install unknown apps" page, turn on the switch, then press **Back**.

This lets you install new versions right inside the app later.

- 7 When every item has a green ✓, tap **Start**.

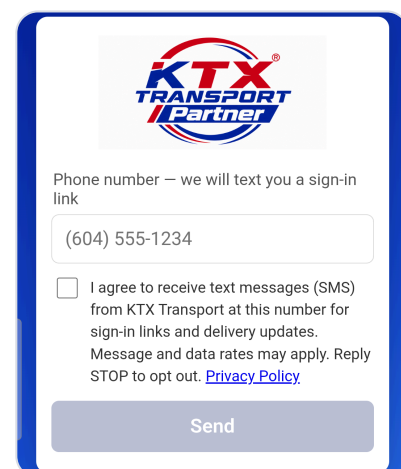

If you tap "Later", this screen comes back the next time you open the app.

4 Sign in

- 1 Enter your **phone number**.

Tick the box to agree to text messages and tap **Send**.

- 2 A text from **KTX Transport** arrives. Tap the **link** in it.
The KTX Driver app opens and signs you in. If you see a **Continue** button, tap it.

Once signed in, you stay signed in for about 6 months.

If the link opens in Chrome instead of KTX Driver, see section 7 "Troubleshooting".

5 Everyday use

- 1 Open the app, tap **PICK UP** and scan the freight (or type the order number).

When the pickup is done, **location sending starts by itself** and "**KTX: Sending location**" appears at the top of the screen.

 **KTX: Sending location**

- 2 While driving there is **nothing else to do**. You can turn the screen off and use other apps such as maps or phone.

- 3 After you deliver your last load, location sending **stops by itself** and the notification disappears.

Do not tap "**Force stop**" for KTX Driver in your phone's app settings. If you do, your location is not sent until you open the app again.

6 Updating the app

When a new version is out, the app tells you when you open it. You do not need the Play Store.

- 1 In the "**New version**" window, tap **Update**.
Busy? Tap "Later" — it will remind you again.

New version 1.0.1

A new version of KTX Driver is available.

Later

Update

- 2 After a short download, when asked "**Do you want to update this app?**", tap **Update**.

Your sign-in and settings stay as they are, and location sending continues if you were driving.

If it says "The update was not installed", open the app again and update once more.

Update

I see "Can't connect"	Check your internet and tap Try again . If it does not work on Wi-Fi, turn Wi-Fi off and use mobile data .
The text link opens in Chrome	Settings → Apps → KTX Driver → Set as default (Open by default) → turn on Open supported links and tick all links. Then tap the text link again.
After pickup there is no "KTX: Sending location"	Settings → Apps → KTX Driver → Permissions: Location: Allow all the time and Notifications: Allowed . Then open the app once; sending starts again.
My location sometimes stops while driving	Settings → Apps → KTX Driver → Battery → Unrestricted . On Samsung phones also check Settings → Battery → Background usage limits and make sure KTX Driver is not in a sleeping list.
"App not installed"	Make sure the phone has free storage. If an older KTX Driver is on the phone, uninstall it and install again (you will need to sign in again).
What Android version do I have?	Settings → About phone → Software information → Android version . Below 8.0 cannot install the app.
